

Exhibition « Places of Hope »
Leeuwarden NL, Cultural Capital of Europe
 04.04 – 25.11.2018

The Urban Future Studio of the University of Utrecht organizes an exhibition entitled « Places of Hope » to present a selection of pioneering future neighbourhoods. At first step, a long list that contained more than a hundred examples of inspiring neighbourhoods has been developed. 21 of these have been selected for presentation at the Places of Hope exhibition based on data availability and social and ecological sustainability. These neighbourhoods are from Europe, North-America, and Japan. Together, they display a wide range of solutions for challenges which have been organized around five key themes, namely mobility, energy, water, inclusivity and circularity.

Aspern Seestadt (Wenen), Austria
 Vauban (Freiburg), Germany
